Everette & Knights

● AEGLE CONNEXUS · LIVE

Every emergency patient, sent to a hospital that can take them.

Aegle Connexus gives ambulance crews, emergency departments and regional coordinators the same live picture of bed capacity, so the decision about where a patient goes is made before the ambulance moves.

01 · AMBULANCE CREW

Refer from the scene

Record the patient's condition and get hospitals ranked by live capacity and travel time.

02 · HOSPITAL ED

Accept and prepare

Accept the referral, see the patient's condition and ETA, and keep bed capacity current.

03 · REGIONAL HUB

Coordinate the network

See capacity across hospitals and step in when a patient needs a destination.

What each team gets

AMBULANCE CREW

- Referral captured in under a minute on a phone
- Destination confirmed once the ED accepts; reroute if plans change

HOSPITAL ED

- Incoming referrals, expected arrivals and handover
- Emergency, resuscitation and critical-care beds, plus services such as theatre, CT and blood bank

REGIONAL HUB

- Occupancy across every hospital in the region
- Patients without a destination, coordination and escalation

Security & governance

- Role-based access for crews, hospital and regional coordinators, and administrators
- Audit trail of referral decisions and account activity
- Accounts and hospitals managed centrally
- Secure sessions that expire and renew automatically
- Hosting and data residency agreed with each partner

See Connexus with your own hospitals.

We'll walk you through a referral end to end.
